RStudio local host using docker

1. Assuming docker is installed
2. Start docker engine
3. Open terminal

```
docker pull npalomin/osm:v1
```

```
docker run --rm -p 8787:8787 -v $(pwd):/home/rstudio -e PASSWORD=pass npalomin/osm:v1
```

OR

```
docker pull rocker/geospatial
```

```
docker run --rm -p 8787:8787 -v $(pwd):/home/rstudio -e PASSWORD=pass rocker/geospatial
```

4. Open browser at localhost:8787
5. Input credentials

user: `rstudio`

password: `pass`

- `Ok` to messages (depends on where `docker` is run):

"Docker" would like to access files in your Desktop folder.

6. In bottom right panel `Upload` or navigate to .Rmd file. Click to open it
7. In main panel `Run` dropdown select `Run All Chunks Below`
8. In bottom left panel Console tab might show:

Enter one or more numbers, or an empty line to skip updates:

9. Press enter to continue
10. When finished In bottom right panel tab Files, check box of `csv` folder, go to `More` dropdown select `Export...` or navigate to location of .Rmd file
